

NOVA™

THE UNIVERSE IS CALLING

The Nova has taken a leap further into space than any ball before. Its revolutionary core has been paired with an innovative combination of coverstock technology to maintain the striking power you've come to expect from a Premier Line ball. So, while maintaining the aesthetic that the Premier line is known for, we've also brought the performance up another level.

BE SUPER LIKE A NOVA

The hand-built Nova is stocked with a potent supply of flare, intensified chemistry, and captivating aesthetics. Showcasing the new and dynamically intense Ignition Core, the Nova features a tour-inspired design that enables better versatility on a wider array of oil patterns. The Ignition Core's dynamic shape forms elongated imbalance that visibly stretches from top to bottom on all four sides. This asymmetry creates a sizable definition when comparing the front to back and side to side. Now, there is a potent imbalance between the X, Y, and Z axes which works in your favor. This greater degree of asymmetry is responsible for the highly dynamic moves asymmetric balls can create.

Weight blocks like the Ignition Core rev up fast and finish strong with a more aggressive movement down lane. Need some extra oomph? Then look no further. The Ignition Core pumps out more than 6" of loaded flare potential! That's more than enough differential to amp your adrenaline levels. Putting it in R2X means all that power and be harnessed with skilled precision. R2X fits seamlessly between the R2S™ and NRG™ formulas found on some of the most successful Storm balls in recent history. At an ideal 3000-grit finish, the perfect combination of length and strength can be achieved.

The etched Storm logo verifies exclusivity and precision crafted quality. Take grip and ignite the nova in your heart.
