

THE NEXT LEVEL OF THRILL TOP THRILL™ **SOLID & HYBRID**

LIGHT OIL | LIGHT OIL

The new Top Thrill Solid and the Top Thrill Hybrid were developed for world class performance on dry lanes. While others develop “entry level” bowling balls, we at MOTIV focus on premium performance for the varied environments a competitive bowler is likely to encounter. With peak performance in mind, the new Top Thrill Solid and Top Thrill Hybrid are designed for higher performance options to attack dry lane conditions.

HALOGEN™ V2 | HALOGEN™ V2 WEIGHT BLOCK

The Halogen V2 core is perfect for performance in light oil. It combines a slow-spinning high RG core for easy length and a lower differential to provide 2-3 inches of track flare potential.
15# RG: 2.59 | 15# Diff: .023 | Flare: 2”+

TURMOIL XP2 SOLID | TURMOIL XP2 HYBRID REACTIVE

The Top Thrill Solid uses Turmoil XP2 Solid coverstock to provide easy length, yet also a smooth and continuous motion. This cover allows for plenty of length to combat drier conditions, without creating a violent down lane motion.

The Top Thrill Hybrid utilizes Turmoil XPS Hybrid coverstock, which is a higher performance option than the original Turmoil XP used previously in the Top Thrill line. As a result, bowlers will see more traction in the mid lane with greater down lane motion.

4000 GRIT LSS | 5500 GRIT LSP FINISH

A 4000 Grit LSS finish on the Top Thrill Solid and a 5500 Grit LSP Finish on the Top Thrill Hybrid tune these two balls to attack dry lane conditions. With peak performance in mind, the new Top Thrill Solid and Top Thrill Hybrid are designed for specific needs expressed by bowlers.
