The !Q Tour 78/U name says it all: a 78 hardness urethane ball! In response to the ever-changing environment, the new Controll 78 Urethane is PBA® compliant with the new hardness rule. In addition to a new urethane material, the C³ Core is featured in this unique concept and has been a staple in benchmark reactions for over 10 years. This low RG core helps the ball to read where it needs to which maintains a true urethane-like reaction. The 500-grit surface preparation keeps short patterns in check!
