

FEEL THE SPEED **SUPRA™ RALLY**

LIGHT OIL

The brand new Supra Rally is designed with one goal in mind, speed around the corner. This finely tuned, angular pearl is designed to turn on the boosters when it sees friction, allowing you to navigate hairpin turns with precision and dominate challenging environments. When oil conditions get dry or beaten up, the Supra Rally thrives, allowing you to move in to find oil and play steeper angles to the pocket.

QUADFIRE™ V2 WEIGHT BLOCK

We swapped the engine in the new Supra Rally with the new Quadfire V2 core. Incredibly, every weight Supra Rally from 12#-16# has the same .040 differential!

15# RG: 2.57 | 15# Diff: .040 | Flare: 4"+

PROPULSION™ DRS PEARL REACTIVE

New Propulsion DRS Pearl Reactive cover technology modifies the already incredibly fast-response Propulsion cover system for higher friction environments. This new DRS (Drag Reduction System) technology reduces friction to make this cover system cleaner and more angular. This new cover technology retains energy through the front of the lane for an explosive backend reaction and powerful continuation through the pin deck.

5500 GRIT LSP FINISH

The Supra Rally comes finished out of the box at a sleek, high gloss 5500 LSP finish. It will be sure to turn heads as fast as it corners!
