TURN UP THE HEAT

FORGE™ FUEL

MEDIUM-HEAVY OIL

The Forge Fuel stokes the flames of the high performance, controllable Forge line. Built on the proven Forge platform, the Forge Fuel is designed to handle aggressive surface adjustments without sacrificing down lane continuation. As you adjust the surface to match changing lane conditions, it continues through the pins far better than a Forge Flare or Subzero Forge at the same finish. This versatility means that one ball can cover more situations, giving competitive bowlers fewer compromises and more confidence.

DETONATOR™ SYMMETRIC WEIGHT BLOCK

This powerful engine features a low RG that gets the ball revving early enough to read in heavy oil and a high differential that creates the flare and traction needed to drive through the pocket.

15# RG: 2.47 | 15# Diff: .054 | Flare: 5"+

LEVERAGE™ MXT SOLID REACTIVE

The biggest upgrade you will find comes from the new Leverage MXT solid reactive coverstock. Engineered to create more responsive than the Leverage MXC cover used on the Subzero Forge, this cover still provides bowlers the traction they expect from a true heavy-oil solid. This cover features Duramax technology built into the cover, helping it to maintain its surface longer, smooth out transition, and create consistent traction shot after shot. The end result is the mid lane control of the Subzero Forge with noticeably more continuation through the pins.

1000 GRIT LSS FINISH

Right out of the box, the 1000-grit Leverage™ MXT coverstock with Duramax® technology digs into heavy oil volumes for incredible control.
